

With an interest in lighting that piqued after taking a college course, Rae expanded on her minimal knowledge of lighting to become a full-time Junior Designer at BEAM.

Learning along the way, she assists the Project Managers and Lighting Designers in the studio with drawings, presentations, schedules and calculations for various types of projects. She contributes to the continued improvement of BEAM's marketing and social media profiles.

Rae is an attendee of major lighting conventions, working on her product knowledge and relationships with representatives. She participates in courses whenever possible to increase her understanding of the many facets of lighting design and lighting science.
